# R Workshop for UNM Ling Grads

## Jason Timm, PhD

This two-part workshop is an introduction to the programming language R, with a focus on data manipulation and visualization utilizing a collection of data science tools known as the **tidyverse**. In the workshop you will learn to process (eg, filter, sort, and summarize) example linguistic data sets in order to answer some exploratory questions. You will then learn to transform these data into a variety of informative plots using the ggplot2 package.

The workshop assumes no prior knowledge of R.

Prior to the workshop, follow the instructions on this website: **https://github.com/jaytimm/UNM-Ling-R-Workshop**

Bring laptop.

**Session #1:
Friday, March 23**

**Session #2:
Friday, March 30**

**1:00-3:00 PM
DSH 128**

*Interpreter provided upon request*
